REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The prior art of records fail to teach or suggest the followings:

A method/ or apparatus for switching data packets in a switching system comprising at least a switching element (source or destination) that maintain an operational state until each of output queues receives state transition requests, wherein the operational state of the switching element is updated upon receiving input packets containing the state transition request by each output queues, as indicated in independent claims 21, 23, 30, 31, and 35.

The invention has the advantage of reducing the reassembling and processing of packets to be forwarded to similar component within the switching system.
